Supports 1,000 RTMP, DASH, and/or HLS Users Natively.

Limitations. Typical Dedicated Transcodes are up to 52 SD Streams, or 13 1080i/p Streams, or 20 720p60 Streams.

Transcode and Process Multiple Streams up to CPU limitations. Typical Dedicated Transcodes are up to 52 SD Streams, or 13 1080i/p Streams, or 20 720p60 Streams.

Supports RTMP, HTTP, and Live Streaming and Works with Atlas™, Wowza®, and Adobe® Flash® Servers. Supports 50 Simultaneous HLS Users. With Optional Atlas™ Add-on, Supports 1,000 RTMP, DASH, and/or HLS Users Natively.

Features
- Input: Simultaneously receives one to eight 8VSB inputs – terrestrial digital or analog RF
- IP input (H.264, MPEG-2, or VC-1): UDP, RTP, RTSP, HTTP, HTTP Live, RTMP (pushed from Flash server)
- IP output protocols: UDP, RTP, RTMP (Open Flash), HTTP, with DLNA support
- Supports HLS (adaptive) for output to mobile devices
- Supports logo insertion, text overlay, and SCTE 35 compliant cue tone insertion (“ad markers”) on outputs
- Supports rotating key servers like Verimatrix® VCAS™
- Performs AES-128 encryption
- Supports 50 HLS users natively. Optional built-in server supports 1,000+ simultaneous HLS, DASH, and/or RTMP users.
- Supports NTSC or PAL
- Transcoding bit rates: .1 to 15 Mbps
- Creates simultaneous High, Medium, and Low bitrate streams
- Supports 1080i, 1080p, 720p, 576i, 480i, and 480p and any other broadcast or video format
- Simultaneous demodulation, transcoding, and encapsulation
- Transcodes up to 20 720p60 HD streams, or 13 1080i/p HD streams, or 52 SD streams from MPEG-2 to H.264, or vice-versa
- Optional H.265 transcodes are up to 5 720p HD streams, or 3 1080i/p HD streams, or 20 SD streams from MPEG-2 or H.264 to H.265, or vice-versa
- SNMP, REST, SOAP support for remote management and monitoring
- Support for Variable Bit Rate (VBR) encoding maximizes adaptive streaming video quality and bandwidth efficiency
- Tested to work with Atlas™, Wowza®, and Adobe® Flash® media servers
- Tested to work with Akamai, Tulix, Verizon, etc. CDN’s
- Tested compatible with major brands of IP devices including Amino™, Roku®, Telergy, Android™, and Apple iPad® and iPhone®
- Tested compatible with major brands of professional H.265, H.264, and MPEG-2 decoders and video servers
- Audio support: AAC, optional MP3, MPEG-1 Layer II, and/or optional “SurCode for Dolby Digital” AC-3
- Settings are remembered when power cycled
- Based on embedded Linux®
- Remote GUI includes some scheduling
- Redundant power supply and optional SFP ports

Overview
The Gearbox™ 8VSB 8 Tuners/IP 52ch is a real time multichannel streamer, integrated RF receiver, and transcoder designed to receive SMPTE 310M (8VSB) signals and transform them into streams that are best suited for customers. It is designed to be scalable, easily adaptable, and field upgradeable to meet the needs of cable operators who are very comfortable with embedded Linux® based appliances. It relies on an Intel® 16 Core CPU as an accelerator. We have also optimized the transcode engine for reliability, efficiency, and flexibility.

The Gearbox is an MPEG-2 to H.264 transcoder or transcoder. It receives multiple 8VSB transport streams, transcodes them to H.264 or optional H.265, and outputs them to an IP network. Resulting streams can be viewed with standard transport stream compatible set-top boxes, streaming video, smart phones, or software clients such as VLC or JW Player. The Gearbox 8VSB 8 Tuners/IP 52ch receives transport streams, demultiplexes the requested services and streams these services using UDP, RTP, RTMP, Adaptive, or HTTP via IP networks as either IP multicast or IP unicast streams. The system transcodes individual streams into H.264 format up to a maximum individual bitrate of 15 Mbps.

The Gearbox 8VSB 8 Tuners/IP 52ch selects all required PIDs and multiplexes the demultiplexed transport stream packets into IP packets.

The unit provides PID filtering of all unwanted traffic, increasing system performance and the number of channels which can be transmitted per unit.

Programs typically are forwarded (pushed) as transport stream packets via UDP or as RTP (real time protocol) payload (RFC 2250). Pushing can be either unicast or multicast. In addition to push, programs can be forwarded on request (pulled) using HTTP, HTTP Live, RTMP, DASH, etc.

Applications
- IPTV head end to feed CDN’s
- Telco TV ingest
- Hotels, Ships, Universities, Resorts feeds
- Streaming to designated VideoLAN VLC or similar clients, or to Roku®, Amino™, or other set-top boxes

Inputs/Outputs

8 8VSB inputs – 4 per port

Transcodes up to 52 SD streams, or 20 720p60 streams, or 13 1080i or 1080p HD streams from MPEG-2 to H.264, or vice-versa.

Specifications

Supported Resolutions – Input and Output

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Supported</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>1920 x 1080</td>
<td>720 x 480</td>
<td>480 x 480</td>
</tr>
<tr>
<td>1280 x 720</td>
<td>704 x 480</td>
<td>480 x 320</td>
</tr>
<tr>
<td>720 x 576</td>
<td>640 x 480</td>
<td>320 x 240</td>
</tr>
</tbody>
</table>

Also supports any custom resolution not listed here, including computer formats like 1280 x 1024, etc. Note: Lower resolution results in higher transcodes. Supports PAL TO NTSC conversion but not NTSC to PAL. Supports closed captioning.

8VSB (SMPTE 310M) Input

Modulation: 8VSB (SMPTE 310M) – terrestrial digital or analog RF

Inputs: RF from antenna

Frequency range: 54 to 860 MHz

Maximum raw throughput: 200 mbps

8VSB (SMPTE 310M) – terrestrial digital or analog RF

Options

- Optional transcoding to H.265
- 4:2:2 10 bit encoding
- Optional DOZER™ Automated UDP Packet Recovery protocol, enabling error-free video delivery over UDP. DOZER ensures smooth MPEG-2, H.264, and optional H.265 delivery through DVEO patented algorithms for automated packet recovery and re-ordering of out-of-sequence packets.
- Optional built-in “Mini Atlas” server supports 1,000+ simultaneous HLS, DASH, and/or RTMP users
