Immediate Release

November 9, 2018

Streaming Media West Booth 200

DVEO Repositions Itself for the Next Five Years

Ad Supported Video Platforms Enable Content Delivery Everywhere on Almost Any Device

San Diego, California – DVEO®, a well established player in the Telco and broadcast industry, is introducing its ad supported comprehensive OTT and IPTV platforms in booth 200 at Streaming Media West in Huntington Beach, California, November 13-14.

It is evident that OTT and IPTV are becoming the world's content consumption methodology and DVEO's customers are now shifting from on-premises hardware supporting set top boxes to myriad cloud-oriented services that support all manner of mobile devices.

In order to survive and compete, DVEO developed comprehensive "Cloud" or "On Premises" video platforms for OTT and IPTV. To complete its offering DVEO developed the pieces needed to offer an end to end solution. These include: 1) DVEO's own brand of video player, 2) DRM support, and 2) An accelerated encrypted file transfer solution.

With these additions DVEO now offers a complete end to end OTT solution using its previously developed building blocks.

"An OTT solution is composed of the following: Video source, encoder, DRM support, ad insertion, distribution, middleware (video players) and streaming," commented Laszlo Zoltan, Vice President of DVEO. "DVEO has every part covered with its own solutions."

Simple Video Platform – VIDEO PLATFORM II™: OTT

Laszlo Zoltan went on to say, "Our customizable VIDEO PLATFORM II is suitable for Telco TV/OTT and cable operators, service providers, universities, businesses, and other organizations. For customers who require a video player with the VIDEO PLATFORM II, we recommend our re-brandable player/middleware for mobile devices and set-top boxes – the zXORA™ Player. It features geo-location-based streaming and ad insertion and provides ad analytics and other statistics."

The VIDEO PLATFORM II and DVEO's other streaming products support Widevine® and Verimatrix® to protect video content.

The VIDEO PLATFORM II can also be ordered with DVEO's secure accelerated encrypted file transfer solution. The FILE HOSE™ combines DVEO's patented DOZER™ error correcting technology and very fast UDP Internet data protocol to send and receive files at the fastest possible speed supported by the operator's Internet connection, with 100% accuracy. All content is encrypted via AES 128.

DVEO, DOZER, FILE HOSE, VIDEO PLATFORM II, and zXORA are trademarks of Computer Modules, Inc. All other trademarks and registered trademarks are the properties of their respective owners.
